

Program Functionality

Functions:

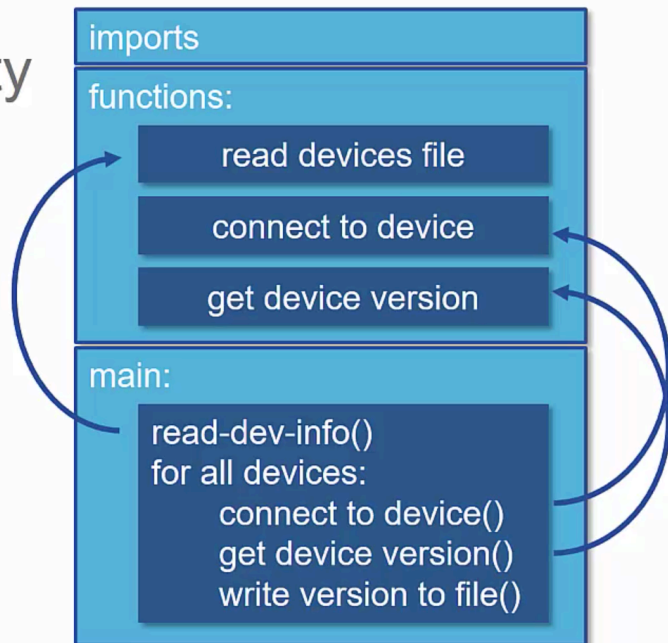

- For isolating tasks

Input and output:

- For reading and writing files

Loops and data structures:

- For iterating through devices in a list

Functions: The application will be isolating code into easy-to-read and maintain functions that are defined within the application.

Input/Output: The application will be exercising the simple manner in which Python allows you to read and write text files stored locally on your system.

Loops: Loops will be used to iterate through sets of things.

Data structures: Data will be stored utilizing tuples and lists.
